Subject: New software environment

Dear Tristan Vuilloz,

We would like to inform you that a new software environment is available on Béluga, Cedar, Graham and Niagara. This new environment offers many advantages including the latest version of most applications, performance optimizations and improved usability.

Important: The 2020 environment will become the default environment on all of our clusters by April 2021. At that point, you will still be able to load the older environment, but new software is only being installed for the newer environment. Therefore, software in the old environment will become outdated.

We strongly recommend that you start testing this new software environment now.

For more information please visit our [documentation](#) .

How to activate this new environment (StdEnv/2020)

- You can activate this environment by using the command:

```
module load StdEnv/2020
```

- If you wish to make it your default before April, use the command :

```
echo "module-version StdEnv/2020 default" >> $HOME/.modulerc
```

Please email support@computecanada.ca if you have any questions or concerns about this new environment. Please include all of the [relevant details](#) in your email.

Thank you,

Compute Canada Support Team
